

Laser Hair Removal

A Guide for Consumers

By Dr. Karina Bibicheff

Laser hair removal has come a long way since the first laser hair removal received FDA clearance in the mid 1990's. Older generation lasers were slow, very painful and worked only on individuals that had darker hair and very light skin. Today, lasers can work well on all skin colors and some lasers are even safe for treating tanned skinned.

When considering the laser hair removal a consumers should consider safety. The following questions should be asked: Is this laser FDA approved for hair removal for my skin type and color? There are multiple lasers available on the market for hair removal. No one laser is ideal for every individual. Depending on your skin and hair color; some lasers will be more effective than others. You need to also ask is a Board Certified physician on site? Although complica-

We believe that an individualized approach is best with realistic expectations for our clients.

tions with new lasers for hair removal are rare, in the event of a complication, you need to know who will provide medical attention. One question that should be considered is does the medical spa provide complimentary consultation? This would enable you to meet the physician and experience a pulse or two before committing to a treatment.

At VITA Ageless Medical Aesthetics safety is our priority. We at VITA Ageless Medical Aesthetics provide laser technology for hair removal, skin rejuvenation and skin tightening. We believe that an individualized approach is best with realistic expectations for our clients. The best client is a satisfied client. Please feel free to call at 516-626-6800 for a complimentary consultation or visit our website at www.VitaMedSpa.com.
